The FWEA Biosolids/Residuals Program Excellence Awards recognize excellence in all areas of biosolids management, including outstanding operating projects, research, technological advances, public acceptability, and risk and cost reduction activities. The current categories and criteria allow for the recognition of a broad spectrum of programs with sound management, effective communication to stakeholders, and community-friendly practices. The process of preparing an application package helps applicants focus on the relevance of their efforts and facilitates the spread of knowledge about the excellence of nominated activities so that others might benefit.

Please provide the following information in sections I through IV, as relevant for your facility/program, to adequately support the application. Please include graphics, be concise and limit your response to no more than ten pages inclusive of forms and supporting information.

I. Facility/Program Basic Information:
Statement of Enhanced Benefits that have resulted from the project, such as lower costs, energy savings, enhanced soil properties, better crop productivity and quality, or improved public acceptance.
II. Written Narrative:
The applicant should include in the package a written narrative as documentation to adequately support their <u>outstanding, unique and innovative</u> biosolids management programs and practices for consideration of an award. The narrative should describe as appropriate, any cost, labor, material, environmental benefits, or time savings derived from such practices.

III. Other Relevant	t Information:	
IV. Certification:
